- They grow feathers.
- They have two wings.
- They lay eggs.
- Some can fly and some cannot.

**Amphibians**

- They have moist, smooth skin.
- They have gills as babies and most lose their gills when they are older.
- They lay eggs.
- They can live both on land and in water.

**Fish**

- Most have wet scales.
- They have gills and fins.
- They live mostly in water.

**Reptiles**

- They have dry scales.
- They often bask in the sun.
- Most lay eggs.

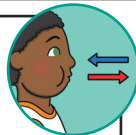

Key Vocabulary	
insect	An insect is a small animal and a type of minibeast. Insects have six legs and three body sections.
carnivore	A carnivore is an animal that only eats other animals (meat).
herbivore	A herbivore is an animal that only eats plants.
omnivore	An omnivore is an animal that eats both plants and other animals.
insectivore	An insectivore is an animal that eats minibeasts such as insects, worms and spiders.

Basic Needs for Survival

Food
Animals must eat food to survive. They may be **carnivores**, **herbivores** or **omnivores**.

Air
All animals breathe. There are a variety of ways animals breathe.

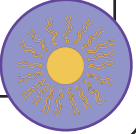

Shelter
Animals need shelter to help keep them safe.

Water
All animals need water to survive.

Direct Heat
Many **reptiles** need direct heat from the sun.

Humans

Humans are also animals. They are **mammals**. They have the same basic needs for survival as other **mammals** but may have them met in different ways.

Babies will need an adult to provide them with food, water and shelter until they are older.
